

17-05 PN ALUMESS - For measuring

Modular clamping and palletizing system for measuring machines

The **ALUMESS** fixturing system is a highly flexible and wide-ranging modular construction system for fixturing workpieces on measuring machines.

The clamping system is based upon perforated plates on which several clamping elements, clamping devices can be positioned. These perforated plates can be screwed onto the measuring plates of the measuring machines.

ALUMESS clamping solutions enable precise and reproducible setups of clamping devices for different workpieces of all industries. They are designed for the flexible use at the measuring station, on coordinate measuring machines as well as on optical measuring systems.

Alumess for cast iron part

Advantages-overview

- Changeover within seconds
- User-friendly
- Flexible
- Easy mounting
- Low-priced
- Palletizable
